

The importance of the water industry is because it is improving our water one drop at a time. Whether that is in affordability, or if everyone is getting enough to run, or the taste of drinking water. Water is used everyday for many different reasons. Like with farmers and ranchers, they need it to feed their cattle, water their crops, clean their machines, and sometimes help the machine run. And after a long day on the field, coming home and hopping in the shower to get nice and clean. Then we have those jobs that require water just to function, like with powerwashing, carwashes, and food service. If they didn't have water, we would have very dirty sidewalks and cars. And food service wouldn't be able to clean their utensils, tables, countertops, and in some cases they would be able to make the food or drinks. Then you have to think of firefighters, if their water pressure is weak, they can't put out the fire. So, thanks to the water industry, everyone gets the water they need. Now, since water is used everyday, that means there is a process, which takes money to do. And since money can't grow on trees (yet), it is going to cost someone a lot of money you would think? Nope. The water industry is making sure that the process for water to become usable, is the most effective and efficient way while making it cheaper. And since we need water to live, they are finding the best way to make the water more clean, which then makes it taste better. Since I live on a farm, I know the taste and look of unclean water. It looks grainy and off colored and it tastes dirty and you feel the bits of dirt on your tongue. But, thanks to the water industry, the water is clean. The water industry also uses art to map out the topography of the land and where the water ways should go. Without the water industry, we would have to find a way to properly clean everything, probably deal with people fighting over water, and there would be way too many fires to deal with and it would be much harder to put them out. That is why the water industry is very important to farmers, firefighters, food service employees, and to everyone else. So thank you, water industry, for taking care of everyone.
